

CMSC423 Fall 2024: Wrap-up and FAQ

End of Semester FAQ

1. When is the final?
 - Wed. Dec 11th (10:30AM-12:30PM)
2. Where is the final?
 - In this room
3. What content will be on the final?
 - Technically, the final is comprehensive. Practically, it will focus on the material we have spent the most time on (there won't be questions about everything). There will almost certainly be a question on (1) full text indexing, (2) alignment, (3) de Bruijn graphs, (4) RNA-seq
4. What will the format of the exam be?
 - Same as the midterm. Short answer & longer-form “thinking” questions. The final will *not* be proportionally longer —**you will have more time per-question than the midterm.**
5. How can I prepare for the final?
 - Go over the lectures, go over your projects, google about material you still don't get, ask us questions on piazza.

End of Semester FAQ

6. What grade will I get?

- I don't know (yet)
- The class will be curved so that the median grade is (at least) around a B, with +/- grades going in ~3-4 point increments from there.
- There is still time to get extra credit via Project 6. This will be worth a full 4 points of extra credit on your final grade!

7. Course survey.

8. Other questions?

What we didn't cover.

Most of bioinformatics and computational biology:

- all of “long read” technology and method development
- single-cell genomics (e.g. single-cell RNA-seq)
- metagenomics
- biological network analysis
- “systems” biology (e.g. regulatory inference)
- biostatistics and statistical interpretation of genomics results
- modern approaches of machine learning in bioinformatics (deep learning)
- much, much more.
